

Woodloes Primary School

Calculation Policy

A guide for teachers and parents: developing children's number sense in mental and written calculation

This policy has been largely adapted from the White Rose Maths Hub Calculation Policy with further material added. It is a working document and will be revised and amended as necessary. Progression within each area of calculation is in line with the programme of study in the 2014 National Curriculum. This calculation policy should be used to support children to develop a deep understanding of number and calculation. This policy has been designed to teach children through the use of concrete, pictorial and abstract representations.

Rationale

It is the intention of this document that the progression in strategies taught is understood alongside the central aim of developing 'number sense': nurturing children's ability to be flexible with using number. It is important then that the policy is not seen as a series of methods to be 'got through', but rather, guidance for strategies that may be used in service of this wider aim. As such, not every stepped approach will be necessary for every child. However, if a child is finding a particular strategy challenging, this may equally signify a conceptual misconception to be addressed. In effective maths learning, procedural fluency in a method must be accompanied by a conceptual understanding of its meaning. As such, standard formal written methods such as 'short division' or 'column method' can be problematic if not fully understood. It is for this reason that written methods must be based on solid foundations of mental strategies, which in turn are supported through the use of manipulatives, images, models and representations.

An established aim of the new mathematics curriculum is that children should learn to reason, explain and justify the types of maths they use by explaining not just what they are doing, but why and how the particular strategy works. Talk and reasoning should therefore be considered as a fundamental part of learning to calculate. The policy of Woodloes Primary is that manipulatives, images, models or representations should be available to children throughout primary school.

Age stage expectations

The calculation policy is organised according to age stage expectations as set out in the National Curriculum 2014, however it is vital that pupils are taught according to the stage that they are currently working at, being moved onto the next level as soon as they are ready, or working at a lower stage until they are secure enough to move on.

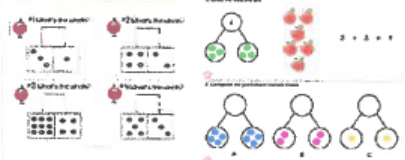

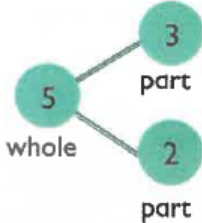

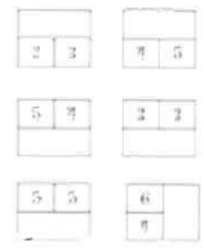

Main Principles for EYFS

In the statutory framework for EYFS, an Early Learning Goal; is the standard children are expected to achieve by the end of their reception year. The ELG relevant to calculations is Number:

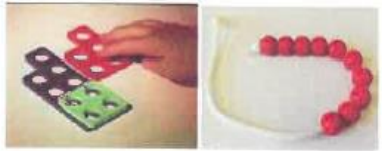

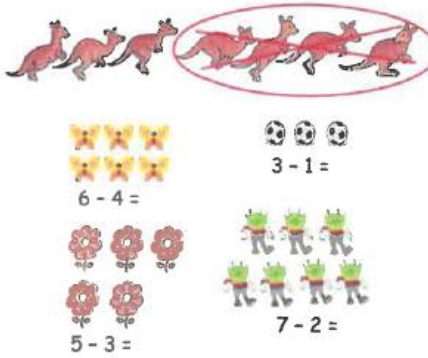

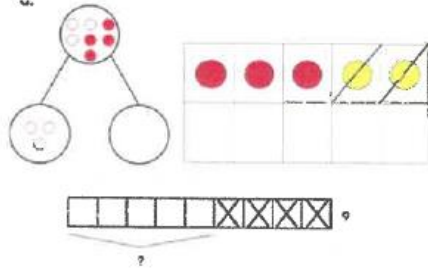

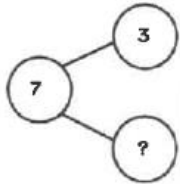

- Have a deep understanding of number to 10, including the composition of each number.
- Subitise (recognise quantities without counting) up to 5.
- Automatically recall (without reference to rhymes, counting or other aids) number bonds up to 5 (including subtraction facts) and some up to 10.

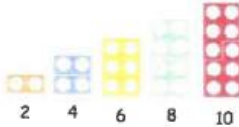

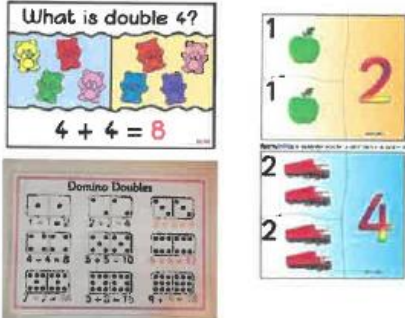

Calculations will be taught in a purposeful, practical way and children will use play and exploration to acquire the relevant mathematical skills to solve them. A large majority of mathematical work is practical, and learning will happen in many different contexts around the indoor and outdoor provision. Some mathematical concepts relating to calculation will be adult/teacher led and children can also freely explore these concepts through a variety of different activities and resources set up each day. Learning is repeated using different resources and representations to embed understanding.

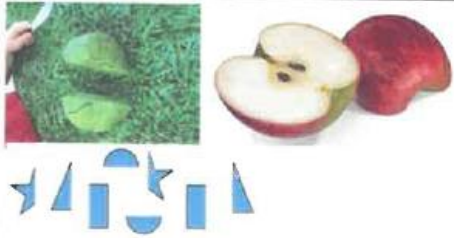

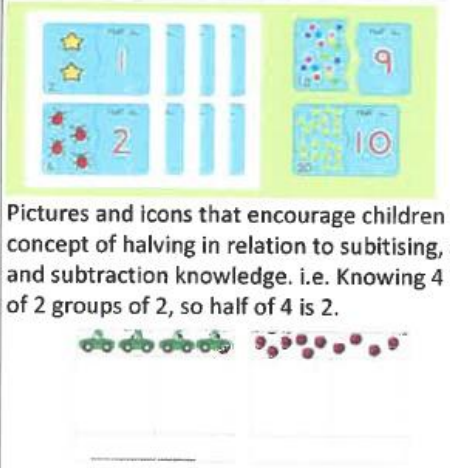

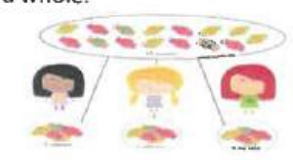

Addition- EYFS

| Objectives | Concrete | Pictorial | Abstract |

| Objectives | Concrete | Pictorial | Abstract |
| <p>Solve problems including halving and sharing.</p> <p>Halving a whole, halving a quantity of objects.</p> <p>Sharing a quantity of objects.</p> |  <p>Children have the opportunity to physically cut objects, food or shapes in half.</p> |  <p>Pictures and icons that encourage children to see concept of halving in relation to subitising, addition and subtraction knowledge. i.e. Knowing 4 is made of 2 groups of 2, so half of 4 is 2.</p> <p>Bar model with pictures or icons to support understanding of finding 2 equal parts of a number, to further understand how two halves make a whole.</p>  <p>Pictures for children to create and visualise 3 or more</p> | |

Use visual supports such as halving mats and part part whole with the physical objects and resources that can be manipulated

Counting and other maths resources for children to explore sharing between 3 or more

Counting and other maths resources for children to share into two equal groups.

Key Stage One

Children in Years 1 and 2 will be given a really solid foundation in the basic building blocks of mental and written arithmetic. Through being taught place value, children will develop an understanding of how numbers work, so that they are confident with 2-digit numbers and beginning to read and say numbers above 100.

Addition and Subtraction: A focus on number bonds, first via practical hands-on experiences and subsequently using memorisation techniques, enables a good grounding in these crucial facts, and ensures that all children leave Year 2 knowing the pairs of numbers which make all the numbers up to 10 at least. Children will also have experienced and been taught pairs to 20. Children's knowledge of number facts enables them to add several 1-digit numbers, and to add/subtract a 1-digit number to/from a 2-digit number. Another important conceptual tool is the ability to add/subtract 1 or 10, and to understand which digit changes and why. This understanding is extended to enable children to add and subtract multiples of 10 to and from any 2-digit number. The most important application of this knowledge is the ability to add or subtract any pair of 2-digit numbers by counting on or back in 10s and 1s. Children may extend this to adding by partitioning numbers into 10s and 1s.

Multiplication and Division: Children will be taught to count in 2s, 3s, 5s and 10s, and will relate this skill to repeated addition. Children will meet and begin to learn the associated $\times 2$, $\times 3$, $\times 5$ and $\times 10$ tables. Engaging in a practical way with the concept of repeated addition and the use of arrays enables children to develop a preliminary understanding of multiplication, and asking them to consider how many groups of a given number make a total will introduce them to the idea of division. Children will also be taught to double and halve numbers, and will thus experience scaling up or down as a further aspect of multiplication and division.

Fractions: Fractions will be introduced as numbers and as operators, specifically in relation to halves, quarters and thirds.

LOWER KEY STAGE 2

In Lower Key Stage 2, children build on the concrete and conceptual understandings they have gained in Key Stage 1 to develop a real mathematical understanding of the four operations, in particular developing arithmetical competence in relation to larger numbers.

Addition and subtraction: Children are taught to use place value and number facts to add and subtract numbers mentally and they will develop a range of strategies to enable them to discard the 'counting in 1s' or fingers-based methods of Key Stage 1. In particular, children will learn to add and subtract multiples and near multiples of 10, 100 and 1000, and will become fluent in complementary addition as an accurate means of achieving fast and accurate answers to 3-digit subtractions. Standard written methods for adding larger numbers are taught, learned and consolidated, and written column subtraction is also introduced.

Multiplication and division: This key stage is also the period during which all the multiplication and division facts are thoroughly memorised, including all facts up to 12×12 . Efficient written methods for multiplying or dividing a 2-digit or 3-digit number by a 1-digit number are taught, as are mental strategies for multiplication or division with large but 'friendly' numbers, e.g. when dividing by 5 or multiplying by 20.

Fractions and decimals: Children will develop their understanding of fractions, learning to reduce a fraction to its simplest form, as well as finding non-unit fractions of amounts and quantities. The concept of a decimal number is introduced and children consolidate a firm understanding of 1-place decimals, multiplying and dividing whole numbers by 10 and 100.

UPPER KEY STAGE 2

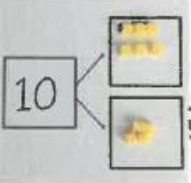

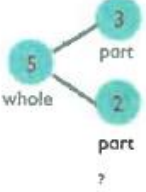

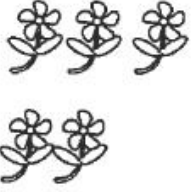

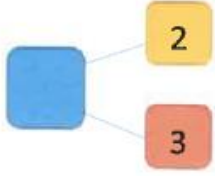

Children move on from dealing mainly with whole numbers to performing arithmetic operations with both decimals and fractions.

Addition and subtraction: Children will consolidate their use of written procedures in adding and subtracting whole numbers with up to 6 digits and also decimal numbers with up to 2 decimal places. Mental strategies for adding and subtracting increasingly large numbers will also be taught. These will draw upon children's robust understanding of place value and knowledge of number facts. Negative numbers will be added and subtracted.

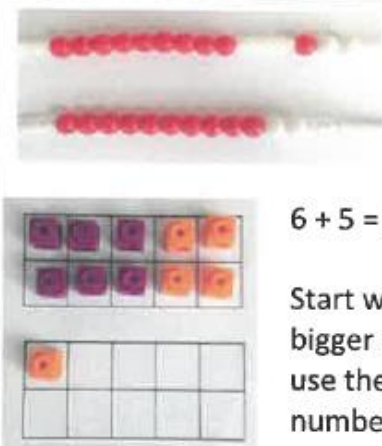

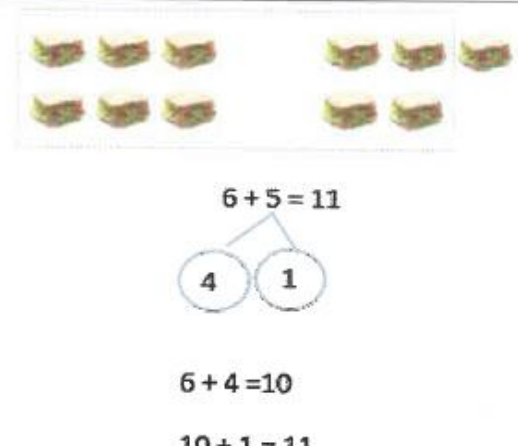

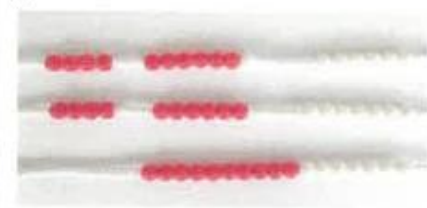

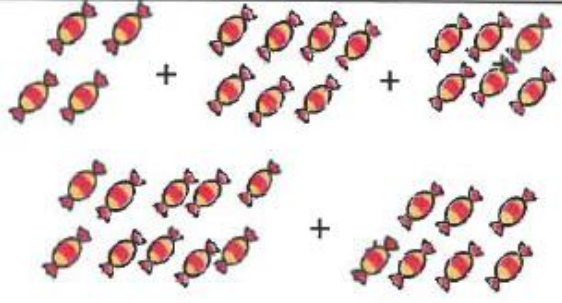

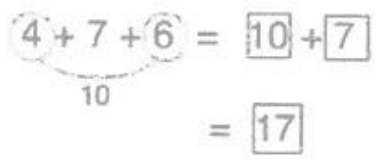

Multiplication and division: Efficient and flexible strategies for mental multiplication and division are taught and practised, so that children can perform appropriate calculations even when the numbers are large, such as $40\,000 \times 6$ or $40\,000 \div 8$. In addition, it is in Years 5 and 6 that children extend their knowledge and confidence in using written algorithms for multiplication and division.

Fractions, decimals, percentages and ratio: Fractions and decimals are also added, subtracted, divided and multiplied, within the bounds of children's understanding of these more complicated numbers. Children will also calculate simple percentages and ratios.

| 3 | 30 | 24 | | | | | | | | | | | | | | | | | |
| Year 5/6 | Compact method | <p>Children can continue to be supported by place value counters at the stage of multiplication.</p>  <p>It is important at this stage that they always multiply the ones first and note down their answer followed by the tens which they note below.</p> | <p>Bar modelling and number lines can support learners when solving problems with multiplication alongside the formal written methods.</p>  | <p>Start with long multiplication, reminding the children about lining up their numbers clearly in columns. If it helps, children can write out what they are solving next to their answer.</p> $ \begin{array}{r} 74 \\ \times 63 \\ \hline 212 \\ 440 \\ \hline 4662 \end{array} $ <p>This moves to the more compact method.</p> $ \begin{array}{r} 74 \\ \times 63 \\ \hline 212 \\ 440 \\ \hline 4662 \end{array} $ | | | | | | | | | | | | | | | |

| Year 3/4 | Division with arrays | <p>Link division to multiplication by creating an array and thinking about the number sentences that can be created.</p>  <p>E.g. $15 \div 3 = 5$ $5 \times 3 = 15$ $15 \div 5 = 3$ $3 \times 5 = 15$</p> | <p>Draw an array</p>  <p>and use lines to split the array into groups to make multiplication and division sentences.</p> | <p>Find the inverse of multiplication and division sentences by creating four linking number sentences.</p> <p>$5 \times 3 = 15$ $3 \times 5 = 15$ $15 \div 5 = 3$ $15 \div 3 = 5$</p> |
| | Short division | <p>Use place value counters to divide using the short division method alongside.</p> <p>$96 \div 3$</p>  <p>$42 \div 3$</p> <p>Start with the biggest place value.</p> <p>We are sharing 40 into three groups. We can put 1 ten in each group and we have 1 ten left over. We exchange this ten for 10 ones and then share the ones equally among the groups. We look at how many are in each group.</p>  | <p>Students can continue to use drawn diagrams with dots or circles to help them divide numbers into equal groups.</p>  <p>Encourage them to move towards counting in multiples to divide more efficiently.</p> | <p>Begin with divisions that divide equally with no remainder then with remainder.</p> <p>$73 \div 3 = 24 \text{ remainder } 1$</p>   |

| Year 6 | Long division | | | <p>Children will use long division to divide numbers with up to 4 digits by 2-digit numbers.</p> $ \begin{array}{r} 015 \\ 32 \overline{)487} \\ \underline{-0} \\ 48 \\ \underline{-32} \\ 167 \\ \underline{-160} \\ 7 \end{array} $ $ \begin{array}{r} 17 \text{ r } 19 \\ 31 \overline{)546} \\ \underline{31} \downarrow \\ 236 \\ \underline{217} \\ 19 \end{array} $ |

Number formation at Woodloes Primary School

This policy is to ensure consistency of number presentation throughout the school and avoid ambiguity between which number is which.

Please Note:

We use the above number formation but due to type face and font it is difficult to follow on paper.

When practising number formation with your child/ren, to use the above number formation.
